What does it mean to be Ahead of the Curve?

Since the Boeing Dash 80 ushered in the dawn of the Jet Age in 1954, the world's best selling commercial aircraft have been built in Renton.

42% of the jetliners in the air around the world today took their maiden flights from Renton Municipal Airport.

With more than 7,000 produced, a Renton-built Boeing 737 takes off or lands somewhere in the world every 2.2 seconds.

Now, thanks to a watershed agreement between The Boeing Company and the International Association of Machinists and Aerospace Workers, Renton's legacy of aviation innovation and excellence will continue with the production of the next generation of single-aisle aircraft, the 737 MAX.
