## Guidelines for Permanent Abandonment in Place of Underground Storage Tank

Separate plans and permits are required for permanent abandonment of underground storage tanks as required by International Fire Code and City of Renton Ordinance. Submit an electronic copy of this application along with plans, cut sheets, calculations and applicable specifications for review. Hard copy paper plans are not acceptable in any case. All information related to the abandonment shall be included with the plan review package. A plan review fee is to be paid at the time the plans are submitted, based on the value of the work to be performed. All information and evidence of required licenses are to be provided with the application for permit. All contractors doing work in the City of Renton are required to have a Renton Business License. If the installation is in conjunction with a building permit, the **Building Permit Number** shall be provided at the time of submittal. The **City assigned** street address must be included on the application. The following specific information is required for this application:

1. A temporary tank abandonment permit shall be obtained, or the conditions of temporary abandonment shall be verified, prior to the issuance of a permanent abandonment permit.
2. A structural engineer report which clearly illustrates removal of the tank from the ground would do structural damage to a significant nearby building. A significant building is defined as one that has an assessed dollar value that is greater than the total cost necessary to remove the tank.
3. A soil engineer report which clearly illustrates the extent (if any) of impacted or contaminated soil in the vicinity of and under the tank and piping system.
4. A proposal identifying how the tank cavity is to be filled to prevent future cave-ins and prohibits liquid absorption in the tank cavity.
5. Certification should be filed by the property owner with King County Property Tax Records that the tank has been abandoned at the property street address.

All field tests and/or inspections must be scheduled a **minimum of 24 hours** prior to inspection. Inspection appointments will be subject to the availability of personnel. The contractor must be present at the time of all field tests.
